| Risk Level          | High                         |
| Confidence          | 90%                          |

## Recommendations:

**\*\*Medical Disclaimer:\*\*** As an AI Multimodal Rural Healthcare Assistant, I'm not a medical professional, and this information is based on general guidelines and available resources. If you've been bitten by a snake, it's essential to remain calm and follow these steps: 1. **\*\*Stay calm\*\***: Panic can increase your heart rate, which may spread the venom. 2. **\*\*Get away from the snake\*\***: If possible, carefully move away from the snake without making any sudden movements that might provoke it. 3. **\*\*Immobilize the affected area\*\***: Use a splint or a bandage to immobilize the bitten limb (or region) if necessary. 4. **\*\*Keep the bite area still\*\***: Try not to move the affected area excessively, as this may spread the venom further. 5. **\*\*Elevate the affected area\*\*** (if applicable): If the snake bite is ...
